

## Comma iTA Intelligent Telephony Adapter for Asterisk

Comma iTA is a flexible and comprehensive telephony interface solution for PBX, contact center and gateway installations.

Asterisk telephony applications, built on commodity computer servers, couple with Comma iTA's via a standard Ethernet interface and an efficient TDM over Packet transfer protocol.

The Comma iTA provides dedicated voice processing hardware thus off-loading critical, channel related processing from the host server, while providing integration to legacy telecom infrastructure.

The Comma iTA thus supports the deployment of large, feature-rich solutions over a distributed and scalable architecture.

### Features

- 1U rack-mount unit supports high density installations
- All the flexibility and features of Asterisk™
- Echo cancellation for all channels
- Timing synchronization of multiple units and host servers over Ethernet
- 10/100Base-T Ethernet connection to host server
- T1/E1 PRI, 1 port (future 2 or 4-port option)

- FXS and FXO, up to 32 ports
- BRI, up to 8 ports
- Extremely cost effective solution for many applications

### Example Configurations

- iTA-4B16S = 4 BRI + 16 FXS
- iTA-1P4O24S = 1PRI + 4 FXO + 24 FXS
